SPECIAL SURFACE-MOUNTED RANGES **IMPACT-RESISTANT** | AGRAR

UNBEATABLY TOUGH

IMPACT-RESISTANT ROBUST ENDURANCE

Some buildings really put electrical installations to the test. Workshops, production halls and public buildings such as concert halls and multi-storey car parks have all had one common requirement for many years: the IMPACT-RESISTANT switch range.

IMPACT-RESISTANT switches are water-, heat- and cold-resistant and can withstand extreme mechanical stresses. They are also fit for use under harsh conditions in line with VDE 0620. This should come as no surprise: All the models in this range are made from high-quality technical components and first-rate thermoplastic material designed for such use.

Actual size

AGRAR THE SPECIALISTS

Sometimes electrical installations are not only subject to climatic and mechanical stresses. Sometimes they are also exposed to aggressive substances. But not even these can get past AGRAR.

This switch range combines the best of the IMPACT-RESISTANT range with all-round resistance against chemicals and corrosion. This is important in order to ensure safety and guarantee reliable electrical installations on a long-term basis.

Typical areas of application include farms, nurseries, dry cleaners, waste water treatment plants, the chemical industry and buildings in coastal areas. AGRAR meets the IP 55 protection standard and consists of a polyamide housing, which is extremely resistant against ammonia vapours in particular.

Actual size

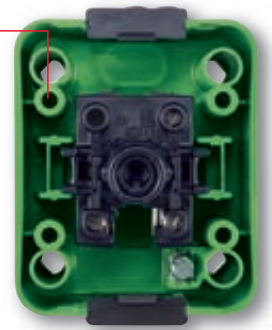

High protective shroud to prevent unintentional switching and protect the mechanics from damage

Can be illuminated as defined by German workplace regulations

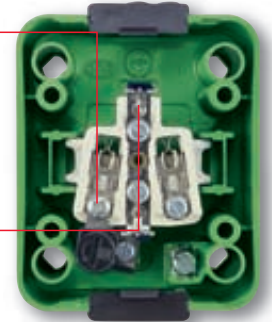

Highly-flexible captive rubber seal

Secured with four rust-proof captive stainless steel screws

Can withstand aggressive atmospheres thanks to corrosion-resistant parts made of special metal alloys and a highly chemical-resistant polyamide housing

VDE-approved network terminals in all devices

Stainless steel pins and lid springs

THE AGRAR PRODUCT RANGE

Schuko® triple socket-outlet

Rocker switch

Rocker control switch

Schuko® socket-outlet

Slide with gland

Connecting element

Double entry

Switches waterproof in line with IP 66

Rocker and housing upper sections secured with stainless steel screws

All upper sections can be illuminated in line with current German workplace regulations

Available as accessory: E10 neon lamp in different colours

High protective shroud to prevent unintentional switching and protect the mechanics from damage

Highly-flexible captive rubber seal

Upper sections secured to lower sections with four quick-mounting screws - sealed and secure

Hidden wall mounting with four screws to protect against vandalism and malicious dismantling

VDE-approved network terminals

Socket-outlet waterproof in line with IP 44

THE IMPACT-RESISTANT PRODUCT RANGE

Combination Schuko® socket-outlet / two-way switch

Hanger with bend protection sleeve and strain relief

CEE 17 socket-outlet

Slide with gland

Connecting element

Double entry
